

Footrest 450x400, ESD, black

Product number X-8035

Weight 6.1kg

Product description

The 450x400 footrest is a versatile, height-adjustable support surface, ideal for workstations of all kinds. It can be flexibly positioned under work tables in workshops and offices and can be individually adapted to the needs of the user and the surroundings. Thanks to the height adjustment, the footrest is suitable for both seated and standing activities. The footplate is made of dissipative plastic, which means that electrostatic charges can be safely dissipated. However, this is only guaranteed if the footplate is conductively connected to the floor or a special potential equalization system. A conductor connected to the underside of the tread plate provides this connection. The leakage resistance R from the surface of the tread plate to the connection of the conductor is between $10^3 \, \Omega$ and $10^5 \, \Omega$.

Product properties

Series Workstation systems, Series 8
